GET INVOLVED!
»SALT DAMAGE TO CULTURAL PROPERTY«

An internet-based information platform and repository produced by the Hornemann Institute of the HAWK

in collaboration with a research network of renowned scientists

www.saltwiki.net

The information platform consists of three areas

- The two Wikis with articles in English (www.saltwiki.net) and in German (www.salzwiki.de) on salt-based damages have been written by registered specialists and improved by all users via the discussion pages.
- A limited access multilingual repository which offers authors of the wiki a secure platform for exchanging scientific information. Here you can find for example scientific data, chemical and physical constants, as well as graphics, photos, short videos and unpublished literature. The use of the "Digital Object Identifier" provides a permanent and reliable means of citing deposited data, that is as serious as references to printed literature.

Become a SaltWiki author or a member of the research network.
Save your scientific data and take advantage of other datasets in the repository.
